

(ii) reacting a metallocene ligand with said alkali metallide of said compound having a -CH group produced in step (i)

wherein said metallocene ligand is a monocyclopentadienyl ligand having the formulae $C_5H_xR_y$, wherein

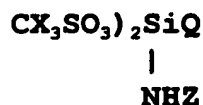

$x = 0-5$

$y = 0-5$

R = any alkyl or aromatic group and H or R can occupy any of the positions 1 to 5 of the formula

wherein a reaction mixture containing an alkali metallide of said metallocene ligand is produced; and
(iii) reacting said alkali metallide of said metallocene ligand with a compound of the formula

in which X is H or F, Q may be an alkyl or aryl hydrocarbyl group, and Z is an alkyl or aryl hydrocarbyl group which may be the same or different from Q.--
